

Mission Statement

Serve as the JIIM Center of Expertise regarding current and future explosive hazards in order to support the Warfighter, protect the force, assure mobility, and enable victory during irregular and conventional warfare.

*(Explosive Hazards:
Mines, Booby Traps, UXO and IEDs)*

COUNTER EXPLOSIVE HAZARDS CENTER

Seeing the Current Fight & Emerging Trends

CEHC maintains contact with operational units and continually monitors the tactical threat environment to identify emerging threats, advise Warfighters, and determine countermeasure effectiveness.

CEHC pulls from a wide variety of sources, across classification domains to support its primary consumers and

also to develop relationships and methodologies that maximize its unique positioning to better push intelligence and countermeasures to the Warfighters, both deployed and deploying.

CEHC's intelligence and operational assessments are disseminated to ensure that the its resident and mobile training opportunities reflect the most up-to-date solutions and countermeasures available.

Unit Support through Contingency-Based Training

CEHC develops contingency-based training to provide deploying forces with relevant and current tactics, techniques and procedures (TTP). This training evolves, adapts and changes as the threat changes when the enemy evolves and adapts.

Current Courses:

- Advanced Route Reconnaissance & Clearance (Operator, Leader, Maintainer, Sapper)
- Intermediate Search Course
- Counter Explosive Hazards – Planner Course
- IED Defeat Train-the-Trainer
- Area Clearance Course
- Explosive Hazards Database
- Explosive Hazards Coordination Cell

Shaping Materiel

Industry and the Science & Technology

community continually develop new materiel in an effort to defeat the ever-changing threat. CEHC conducts unbiased DOTMLPF* analysis and assists in testing of this emerging materiel based on current threat information. Once technology or a piece of equipment has been identified as an effective countermeasure, the CEHC assists in accelerated integration and fielding plans.

JJIM Focused

Because the current threat crosses multinational and multi-agency lines, the CEHC fosters relationships with Joint, Interagency, Intergovernmental and Multinational (JJIM) partners. CEHC works with all DoD services, government agencies, and our NATO and Coalition allies in a collaborative effort to achieve victory in our common fight.
